Fast and furious: How fast can we go?

Patients' increasing demand for shorter treatment times, for predictable success and the positive effects on productivity and growth have made immediate protocols in implant dentistry increasingly popular among patients and dental professionals.

The growing evidence regarding extraction and immediate implant placement, as well as immediate loading, is nowadays widening the treatment options. The purpose of this congress is to help you to identify the indications for immediacy in implant dentistry. Confidently and Efficiently provide your patients with fastened treatment protocols, whenever clinically possible. Whether it is a single tooth, multiple teeth or full-arch cases.

Do you want to become a master in immediacy?

Join us at our first ITI Belux congress in Bruges!
